

MEADOWBROOK POND FACILITY REHABILITATION PROJECT

Improving stormwater detention and flood control in your neighborhood.

About the Meadowbrook Pond Facility

The Meadowbrook Pond Stormwater Detention and Flood Control Facility (The Meadowbrook Pond Facility) is a Seattle Public Utilities (SPU) site located in northeast Seattle.

The Meadowbrook Pond Facility was designed to provide multiple stormwater benefits, including flood reduction, water quality improvement, sediment removal, and habitat improvement in Thornton Creek.

The Meadowbrook Pond Facility also provides additional public benefit such as wildlife habitat and open space.

Project Overview

To comply with federal and state requirements, SPU will conduct necessary, routine maintenance to remove accumulated sediment from the Meadowbrook Pond Facility. No safety or operational improvements are included in the scope of this maintenance project.

Project Schedule

Early 2018 The project is currently in the design phase. SPU is currently implementing initial community outreach.

Mid 2018: SPU is planning to remove sediment during the agency-approved 2018 *fish window*—a period in July/August when in-water construction minimizes risk to fish and their habitat.

Next Steps

SPU will provide updates to the community about the project during planning and construction phases.

To sign-up for email updates about the project:

1. Email SPU_Meadowbrook-subscribe-request@talk2.seattle.gov.
2. Click on the link in the confirmation email within 48 hours of receipt.
